BCD (digital display)

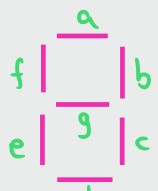
Following the example covered in class, get the simplified of a

A digital clock face is a grid of lights:

⇒ A clock face with all lights turned off

⇒ A clock face representing the number 7 with 3 lights turned on

So we can assign a variable to each light to control which turns on to represent any number 0-9 ⇒



I_3	I_2	I_1	I_0	Decimal # that we want to represent	a	b	c	d	e	f	g
0	0	0	0	0	1	1	1	1	1	1	0
0	0	0	1	1	0	1	1	0	0	0	0
0	0	1	0	2	1	1	0	1	1	0	1

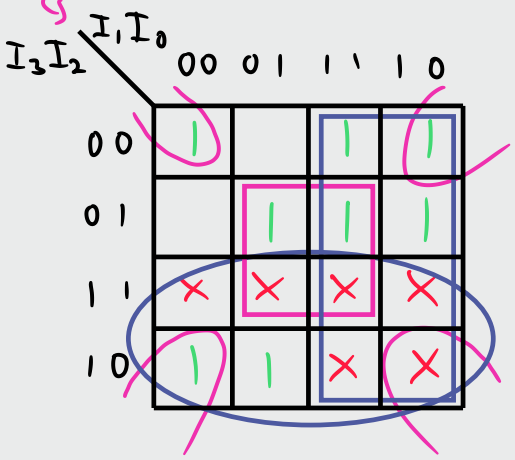
Don't Cares

↳ we don't use these

Since we want the boolean expression that outputs g, we select the entire column of a and feed it to a K-map.



$$I_2'I_0' + I_2I_0 + I_3 + I_1$$

↳ simplified expression of a
